

COGNITE
AI FOR INDUSTRY

Simple Access to Complex Industrial Data

Get 400% ROI and accelerate
your digital road map by 10-25x
with Cognite Atlas AI™
and Cognite Data Fusion®,
the #1 DataOps software
built to solve the industrial
data and AI problem.

Smarter Operations Start Here

with Simple Access to Complex Industrial Data

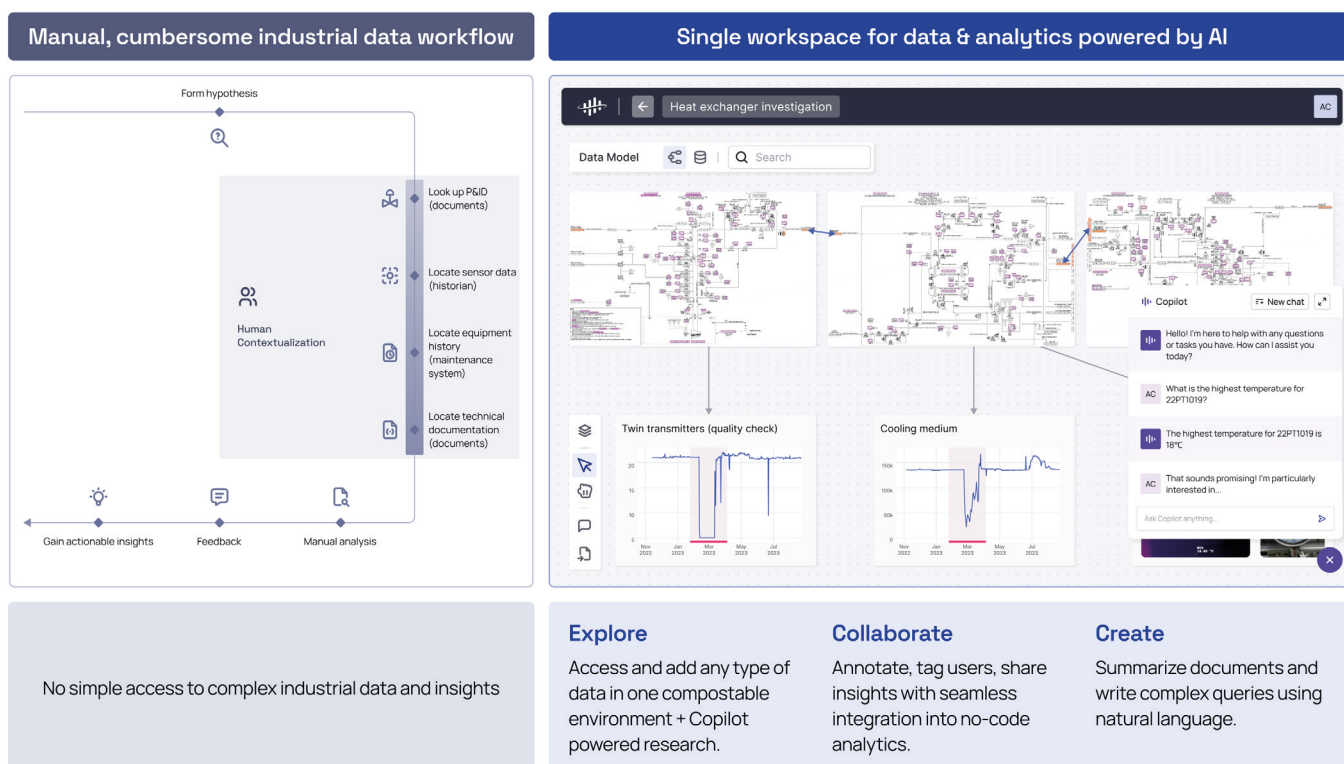

The industrial data landscape is complex. Different data types are difficult to access and use, even after ingesting data into a data lake, because the data across these sources don't match. Built-for-purpose applications may solve this data problem for one specific use case, but they also create more silos.

This complexity makes exploring, understanding, and using industrial data hard and time-consuming. It also decreases the reliability of generative AI and limits the path to deploying AI solutions across an organization, hindering workflow optimization and increasing operational risks like production downtime.

Cognite solves this problem at scale by making data easier to find and use so process engineers, field workers, maintenance teams, and other data consumers can make the right decisions at the right time.

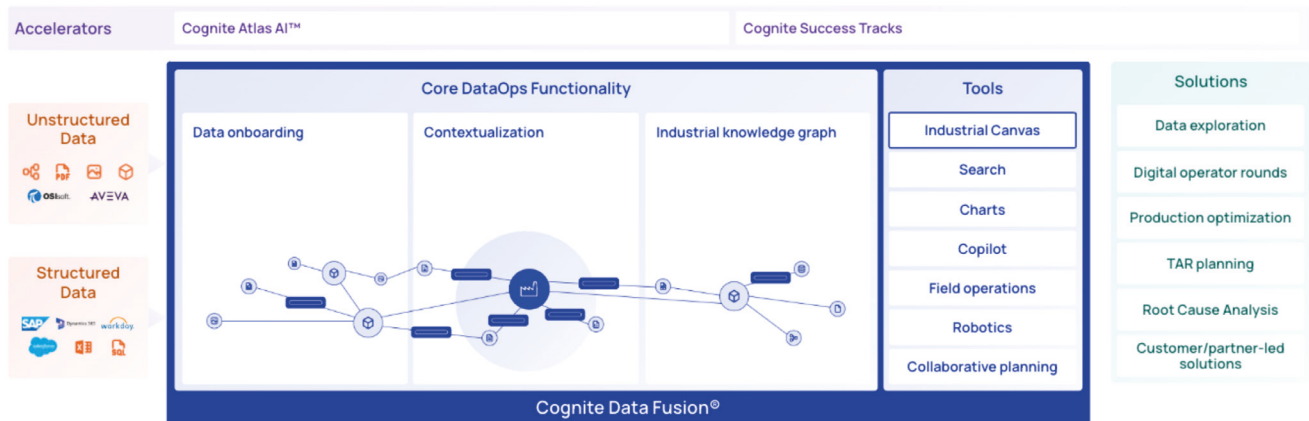

From this...

...to this

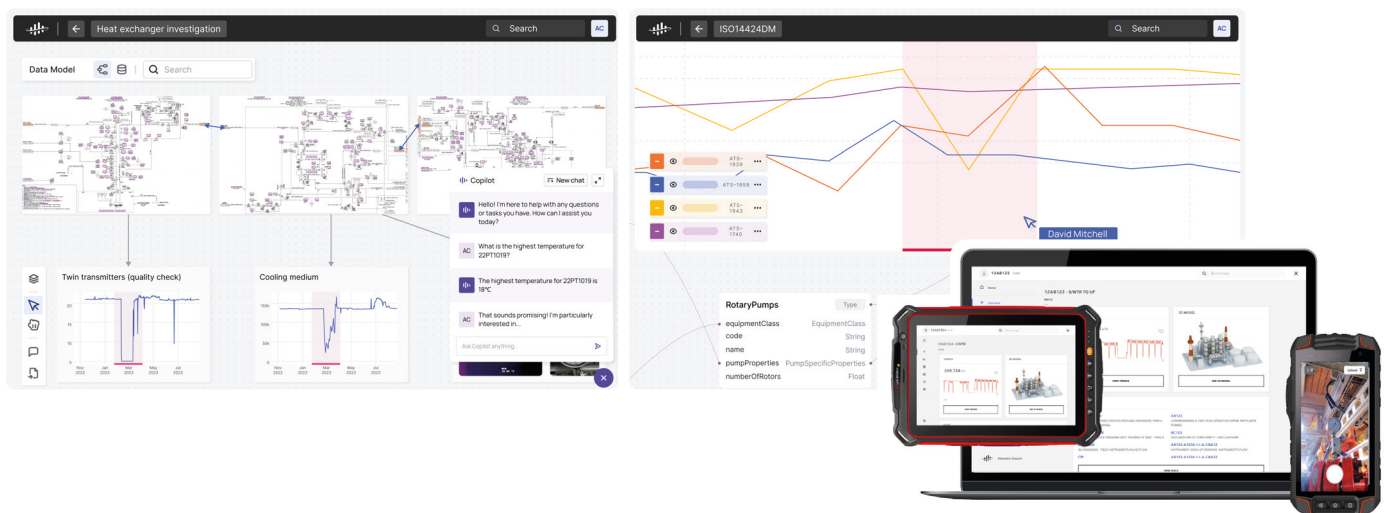

Cognite has a **proven 400% ROI** from solving the data and AI problem and enabling efficiencies that can generate tens of millions of dollars in business impact for our customers.

Cognite delivers an Industrial DataOps platform that liberates siloed data and empowers customers to solve complex business problems with AI-powered solutions.

Cognite Data Fusion® is the only purpose-built platform for messy industrial data. We can handle billions of streaming time series data, enable interactive engineering diagrams, and more. We do this by using AI and other tools to find and map the meaningful relationships between the data across various sources (such as time series, engineering diagrams, equipment logs, maintenance records, 3D facility models, images, large point clouds, and more).

Intuitive tools, prebuilt AI capabilities, and a low-code industrial agent builder, Cognite Atlas AI™, drive efficient use of analytics and automated workflows and enable AI to carry out more complex operations with greater accuracy.

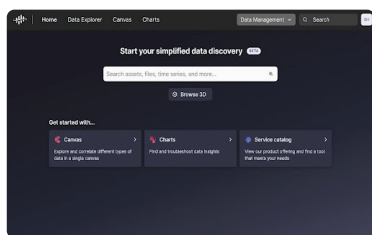

Our solution is fully open with a single, stable API and well-documented SDKs, giving you flexibility while benefiting from the efficiency and scalability of an out-of-the-box solution. We provide deep in-house domain expertise, as well as a growing partner ecosystem to quickly connect off-the-shelf applications or develop new solutions to meet real-world demands.

Cognite Atlas AI™

AI for Industry

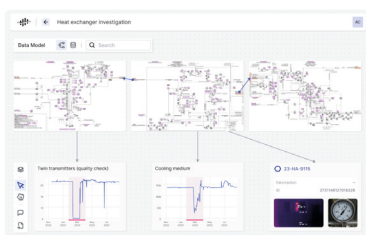

Cognite Data Fusion® solves industrial Data and AI challenges to improve operational performance, reduce costs, unlock opportunities in real-time, and enable next-generation industrial operations by deploying AI at scale:

Deliver unified industrial information in one space quickly

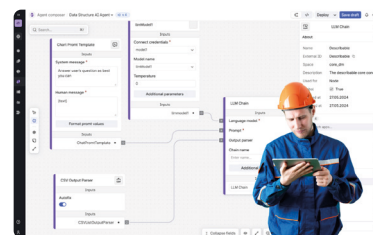

- Natural Language Search
- AI Document Interrogation
- Gen AI Powered Contextualization

Solve and scale the most critical operational use cases

- Root Cause Analysis
- Production Optimization
- TAR planning and more

Deploy autonomous industrial agents

- Defined tasks suitable for Gen AI
- Workflow and process automation
- Increased operational efficiency

Cognite Atlas AI™ is an industrial agent workbench that extends Cognite Data Fusion® and delivers everything you need to carry out more complex operations with greater accuracy.

Cognite Data Fusion® with Atlas AI™

Specialized industrial agents

Virtual employees tailored to automate complex industrial tasks

Maintenance specialist agent

OT data agent

Data scientist agent

Procedures agent

Maintenance specialist agent

Event alarm enrichment agent

Unified industrial data in a single workspace

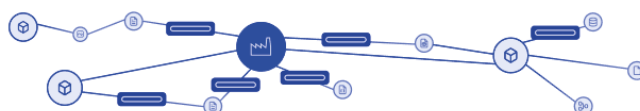

Industrial Data Search

Industrial Canvas

No-code Analytics

Industrial Knowledge Graph

Purpose build industrial data and AI platform

Data sources

Field workers data

Operational (OT) data

Conventional (IT) data

Engineering (ET) data

Robotics data sources

Cognite Atlas AI™ drives accurate and powerful applications for specific industry-relevant tasks with a unified workbench.

Industrial agents

Pick from a library of pre-built industrial agents or use the low-code agent builder to create and deploy custom agents.

Industrial Knowledge Graph

A semantic Industrial Knowledge Graph with Context Augmented Generation (CAG) for safe and dependable results.

autoLLMs, AI architecture & more

Pick the best LLM/SLM/Custom LM for your specific data, use case or industrial agent. Plus, utilize foundational models, including abstraction layer and prompt optimization.

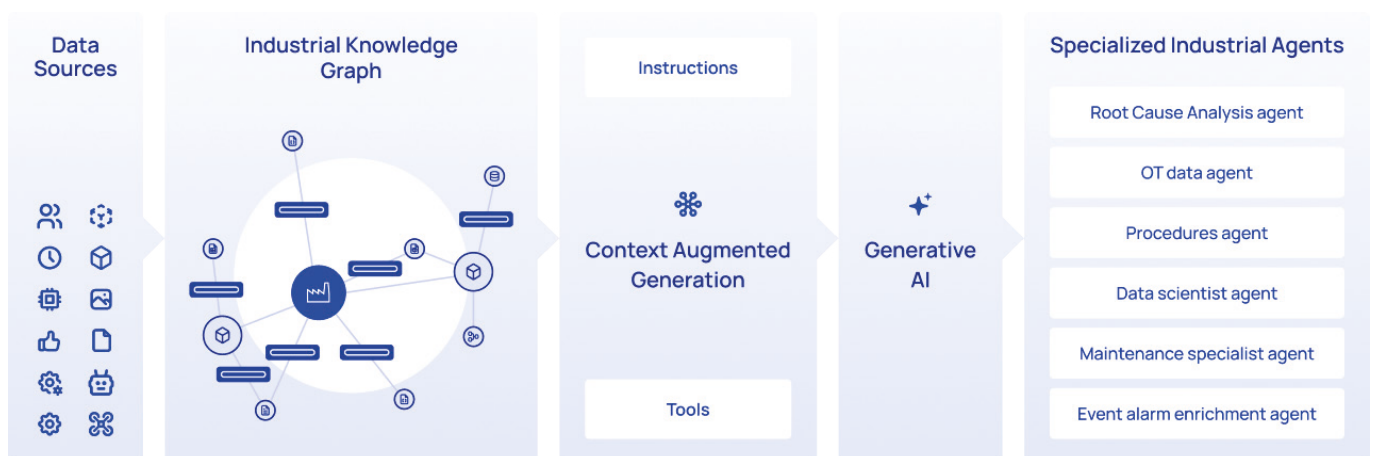

Easy deployment

Natively deploy industrial agents into all Cognite product portfolio interfaces or 3rd party interfaces such as Microsoft Copilot via easy plug-ins.

Cognite does AI better with Context Augmented Generation securely grounded in your data

Traditional Retrieval Augmented Generation (RAG) allows LLMs to leverage information retrieved from your entire database. CAG further augments LLMs with context derived from previous interactions, user data, or domain-specific information, driving more accurate and powerful applications for specific industry-relevant tasks.

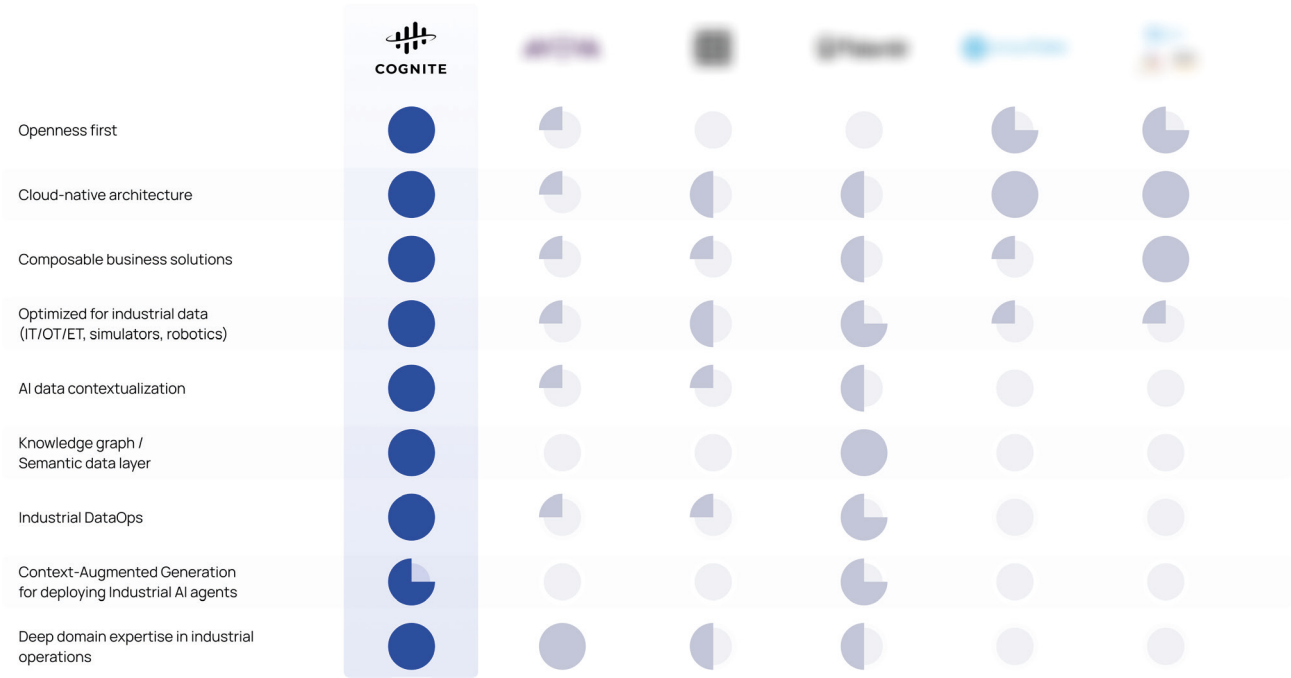

What Cognite can do for you

Your digital and operations teams deserve industry-leading data & AI software that meets you at your current digital maturity and helps propel your operations to the next level. Cognite's pure

industrial heritage and unmatched suite of data and AI capabilities empower you to build and scale digital operations use cases 10x faster.

\$26.95M	\$21.56M	400%	14 months
Benefits present value	Net present value	Return on investment	Payback period

In a landscape of technology partners, pedigree, focus, and culture matter

GET IN TOUCH AND SEE FOR YOURSELF

7-12x	71%	10-25x
Find the right data 7-12x faster	Analytics ready data 71% faster	Faster solution deployment
Intuitively discover data from multiple IT/OT/ET sources through a single point of access	Use automation to contextualize and map relationships across your data sets and systems	Scale quickly with out-of-the-box tools for domain experts and AI-populated application templates

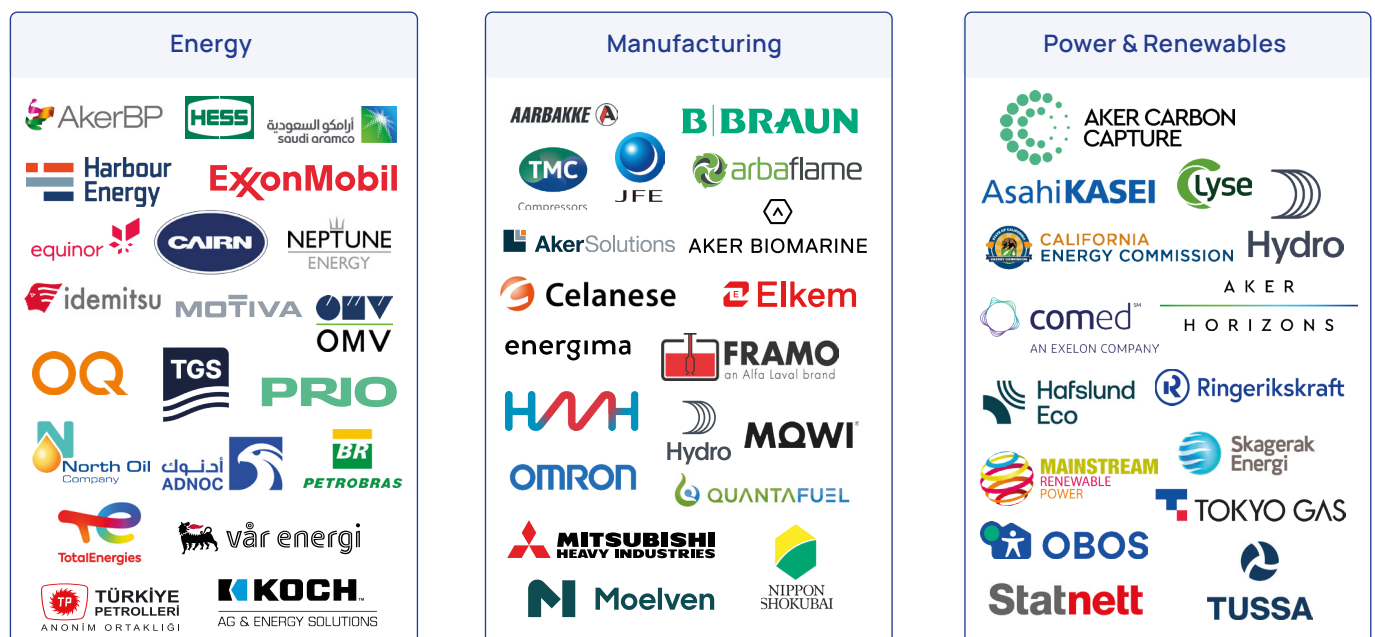

Industrial DataOps for Global Industry

About Cognite

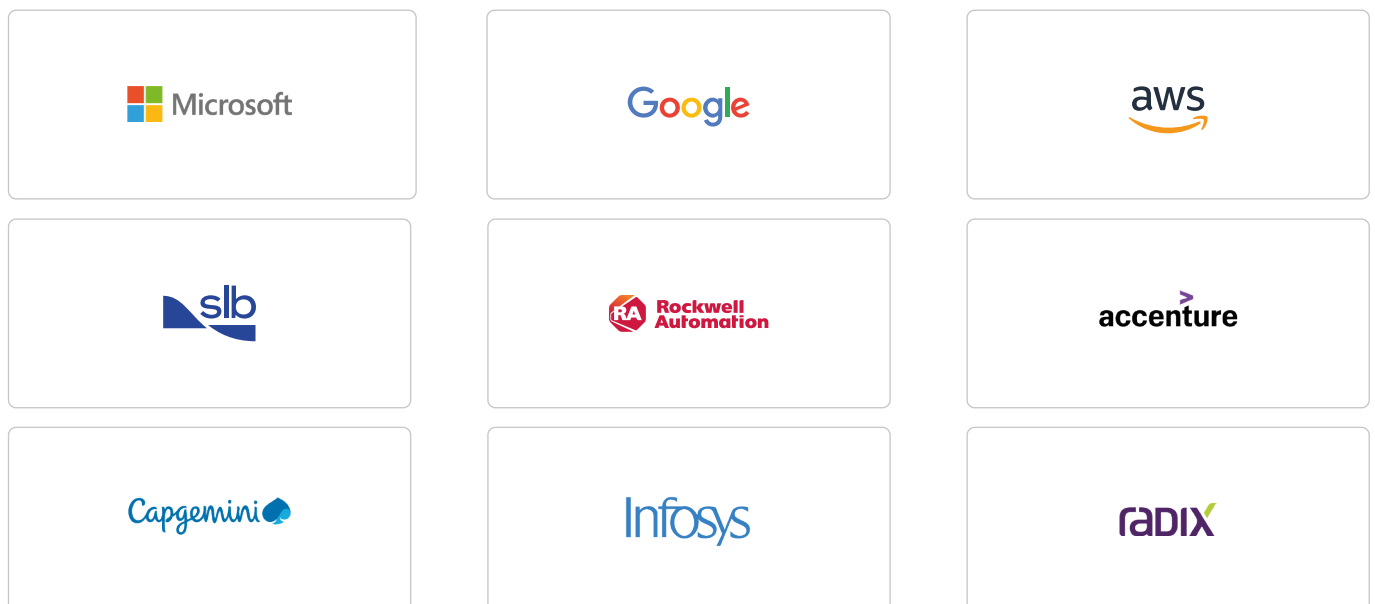

Cognite makes generative AI work for industry. Leading energy, manufacturing, and power & renewables enterprises choose Cognite to deliver secure, trustworthy, and real-time data to transform their asset-heavy operations to be safer, more sustainable, and more profitable.

Cognite provides a user-friendly, secure, and scalable platform that makes it easy for all decision-makers, from the field to remote operations centers, to access and understand complex industrial data, collaborate in real time, and build a better tomorrow.

Our customers are bold innovators across verticals and across regions

And our partners are the world's leading experts in industrial solutions

Learn more about Cognite Data Fusion®

Cognite Data Fusion®, the leading Industrial DataOps software, makes data more accessible and meaningful to humans and machines, delivering trusted data and insights to unlock opportunities in real-time, reduce costs, and improve the integrity and sustainability of your operations.

Cognite Hub

Cognite Hub is a community of customers, partners, and Cogniters, who come together to pool their unique expertise. With diverse voices pitching in on problems, feature requests, and more, through Cognite Hub we build, deploy, and scale products that are solving some of the world's biggest industrial problems.
